## Dental Implants

Dental implants are excellent dental replacements that are both functional and esthetically attractive. Since the implants are integrated into your jaw bone, they will look and feel very natural. It provides an excellent and a very secure fit, giving you so much more comfort than any conventional substitutes. Unlike a dental bridge no damage is done for adjacent teeth

**Dental implant treatments are perfect solutions for:**

- Missing Single Tooth
- Missing Few Teeth
- Missing Complete Upper and Lower Teeth
- Mobile Natural Teeth
- Ill Fitting Dentures
- Failing Bridges
- Failing Root Canal Treatments

Dental Implants stops shrinking of jaw bone associated with loss of teeth. Hence the shape of the face is retained. An integrated implant is 8 times stronger than a natural tooth and it could last a life time.

## DR. BIJU THOMAS

FFDRCSI

(Fellowship from the Royal College of surgeons, Ireland)

FICOI

(Fellowship from the International Congress of Oral Implantologists, USA)

### Specialist Implantologist and General Dentist

Special interest:

- Full mouth dental implant treatment
